Health Condition: _____

Feeding period: _____

Next check up: ____/____/____

**Feed your pet only the
recommended diet for the
specified duration,
and limit treats to help avoid
creating new disturbances.**

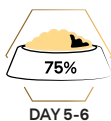

Switching to a new diet

DAY 1-2

DAY 3-4

DAY 5-6

DAY 7

Old food ●
New food ●

Consider feeding smaller meals more frequently to optimise digestion.

Access the Daily
Portion Calculator to
feed the right amount:

**After completing the feeding period,
consult your vet about the next steps
and any additional dietary needs.**

Nurture their microbiome

- ☐ **FortiFlora®**: a probiotic (SF68) that helps reduce loose stools associated with stress, antibiotics or diet change and enhances the body's natural defences.

- ☐ **FortiFlora® PLUS**: a probiotic (SF68) combined with a prebiotic (psyllium) that helps with gastrointestinal disturbances and loose stools associated with microbiota imbalance

- ☐ **HydraCare™**: a complementary pet food that helps increase total liquid intake and promotes hydration

Additional notes:

Be part of your cat's Digestive Health Journey

As a pet parent, you can support your cat's digestive health with simple, easy changes to their diet and environment, helping to care for their digestive system and overall well-being.

Is your cat...

How to help:

In need of additional gut support?

During antibiotic treatment, diet changes or stressful events, your cat might need extra support to restore their digestive balance.

Promote a balanced microbiome

Probiotics help reduce loose stools and enhance natural defences, while prebiotics support beneficial bacteria for gut health and balance.

Showing a lack of appetite?

Digestive upsets can cause discomfort and nausea, leading to a reduced interest in food.

Encourage their mealtimes

Offer them highly palatable, specialised diets like PRO PLAN® VETERINARY DIETS EN Gastrointestinal or sprinkle FortiFlora® on the food to make it even tastier.

Straining in the litter box?

Constipation is a common digestive issue in cats, and it can be caused by a variety of factors.

Ease Your Cat's Discomfort

Give FortiFlora® PLUS to help ease the passage of faeces. You can also increase hydration and brush your cat regularly to reduce hair ingestion and prevent blockages.

Less active than usual?

Digestive upsets can be physically draining and may result in lethargy or weakness.

Take it easy

Create a comfortable resting area to relax and encourage some gentle playtime with their favourite toys.

In need of additional hydration?

Loose stools can lead to a loss of water and electrolytes, potentially causing dehydration.

Provide plenty of water

Make sure your cat always has access to fresh, clean water and consider providing Hydra Care™, a tasty, soft textured gravy which is served on its own, as an extra third bowl.

If you have any questions, or would like more information, please speak to your veterinarian.
