

Faecal Scoring Chart

Faecal consistency is mainly influenced by the amount of moisture in the stools and can be used to identify changes in intestinal health. Ideally, in a healthy animal, stools should be firm but not hard, pliable and segmented, and easy to pick up (score 2).

SCORE	CHARACTERISTICS
1	<ul style="list-style-type: none"> Very hard and dry Often expelled as individual pellets Requires much effort to expel from body Leaves no residue on ground when picked up <p>Consider whether a dietary change would help this pet, along with increased water intake.</p>
2	<ul style="list-style-type: none"> Firm, but not hard, pliable Segmented in appearance Little or no residue on ground when picked up <p>Consider whether a dietary change would help this pet, along with increased water intake.</p>
3	<ul style="list-style-type: none"> Log shaped, moist surface Little or no visible segmentation Leaves residue on ground, but holds form when picked up <p>Consider whether a dietary change would help this pet, along with increased water intake.</p>
4	<ul style="list-style-type: none"> Very moist and soggy Log shaped Leaves residue on ground and loses form when picked up <p>Consider whether a dietary change would help this pet, carry out a nutritional assessment to plan next steps.</p>
5	<ul style="list-style-type: none"> Very moist but has a distinct shape Present in piles rather than logs Leaves residue on ground and loses form when picked up <p>Consider whether a dietary change would help this pet, carry out a nutritional assessment to plan next steps.</p>
6	<ul style="list-style-type: none"> Has texture, but no defined shape Present as piles or spots Leaves residue on ground when picked up <p>Consider whether a dietary change would help this pet, carry out a nutritional assessment to plan next steps.</p>
7	<ul style="list-style-type: none"> Has texture, but no defined shape Present as piles or spots Leaves residue on ground when picked up <p>Consider whether a dietary change would help this pet, carry out a nutritional assessment to plan next steps.</p>

Small vs. Large Bowel Diarrhea: Spotting the Difference

CHARACTERISTICS *	SMALL BOWEL	LARGE BOWEL
Defecation frequency	Normal to slightly increased	Markedly increased
Faecal volume	Normal to increased	Markedly decreased
Faecal quality	Very watery to semi-formed (typical score 6, 7)	Semi-formed, gelatinous (typical score 4, 5)
Frequent urges to defecate	Normal to slightly increased	Markedly increased
Tenesmus (Straining)	Absent	Present
Blood in faeces	Dark, old blood, tarry	Bright red, fresh-looking
Mucus in faeces	Rarely	Frequently
Fatty stool	Sometimes	No

*In some cases both small bowel and large bowel are affected and clinical signs will vary.
